

CONTENT STUDIO

How to Make & Post Our Social Media

A simple, step-by-step guide. If you can send an email, you can do this.
Nothing you click can break anything.

START HERE

What is the Content Studio?

It is where we make posts for **Instagram, Facebook, LinkedIn, and TikTok**. A smart helper writes the posts for us — with the words, the picture, and the hashtags all done. Then a person (you or Ben) reads each one and says “**yes, post it.**” A post never goes online until a person says yes.

THE TWO WEB PAGES YOU WILL USE

Bookmark these two links

1 · THE EDITOR

Where you read, fix, and approve posts

verticaljetsales.com/admin

This is your main workspace. You log in here with a free GitHub account (Ben sets this up for you one time).

2 · THE BOARD

Where you **SEE** the finished posts

verticaljetsales.com/content.html

Every post shows as a card. Click a card to see exactly what the picture and words will look like online.

The one golden rule

Nothing posts until its status says “**Approved.**” Everything else is safe. If you are ever unsure, just leave it as a **Draft** and nothing will happen.

FIRST TIME ONLY

How to log in

You only do this once on your computer.

1

Get a free GitHub account

Go to **github.com** and sign up (it is free). Send your username to Ben so he can give you access.

2

Go to the Editor

Type **verticaljetsales.com/admin** into your web browser.

3

Click “Sign in with GitHub”

Type in your GitHub email and password. That’s it — you’re in.

JOB 1

Say “yes” to a post

This is the most important job — approving a draft so it can post.

1

Open the Editor

Go to **verticaljetsales.com/admin**.

2

Click “Content Studio”

You’ll see a list of posts. The new ones say **[Draft]**.

3

Click a post that says **[Draft]**

It opens so you can read the whole thing.

4

Read it and fix anything

The words people will see are in the “**Body / Caption**” box. Change any wording you want.

5

Change “Status” to “Approved”

Find the **Status** box near the top. Click it and pick **Approved**.

6

Pick the day in “Scheduled For”

Choose the date you want it to go online.

Click “Save”

The Save button is at the top of the page. **Done!** It will post by itself on that day.

JOB 2

See what a post will look like

Preview the finished picture and words before it goes out.

1

Open the Board

Go to verticaljetsales.com/content.html.

2

Click any post card

A window opens showing the real picture (or video) and the caption — exactly what followers will see.

3

Click the X to close

To make changes, click **“Edit this post”** and it takes you right to the Editor.

JOB 3

Add a new idea — the easy way

Best for articles you read or ideas you have. The helper turns them into posts for you.

1

Open the Editor

Go to verticaljetsales.com/admin.

2

Click “Ideas & Article Inbox”

Then click **“New Idea / Article.”**

3

Drop in your idea

Give it a short name. Paste an article **link**, or type your idea in the **notes** box. Add photos if you have them.

4

Make sure Status says “New”, then Save

Later, tell Ben (or Claude) to “work the inbox” and your idea becomes ready-made drafts.

JOB 4

Write your own post — the other way

Use this if you want to type a post yourself.

1

Editor → “Content Studio” → “New Content Item”

2

Fill in the basics

A **Title** (just a label for us), pick a **Channel** (like instagram), and type the post in **Body / Caption**.

Leave Status on “Draft” and Save

It now waits for a “yes” (Job 1). Nothing posts until then.

JOB 5

Get rid of a post you don't like

Two easy choices — both keep it from ever posting.

1

Open the post in the Editor

Click it from the “Content Studio” list.

2

Delete it, or archive it

Click the “⋮” (three dots) at the top and choose **Delete entry** to remove it. Or, to keep it but never post it, set **Status** to **Archived**.

Deleting a Draft is always safe — Drafts never post anyway. Use “Archived” when you might want it later.

CHEAT SHEET

What the Status words mean

Idea	A seed. Not written into a post yet.
Draft	The helper wrote it. It is waiting for your “yes.” (Safe — will not post.)
Needs Edit	Send it back for changes before approving.
Approved	You said yes. It is cleared to post. 
Scheduled	It is lined up in our posting tool and will go out on its date.
Posted	It is live online. 
Archived	Kept in the library, but will never post.

If you ever get stuck

- **Nothing can break.** Every change is saved and can be undone. Click around and explore.
- **When in doubt, leave it as a Draft.** Drafts never post on their own.
- **Need a post changed or a new batch made?** Just tell Ben, or ask Claude in the chat in plain words (for example: “make 3 posts about the Beechjet”).

How your changes show up

To keep our costs down, the website refreshes on a schedule — about **twice a day** (morning and afternoon) — instead of the second you save. Your saves are always safe in the meantime. So if the board looks like it “didn’t update,” it usually just hasn’t refreshed yet.

PUBLISH NOW

Want your changes live right away?

Use this after approving posts when you don’t want to wait for the next refresh.

1

Open GitHub → the “Actions” tab

Go to github.com/verticaljetsales/vjs-site and click **Actions** along the top.

2

Click “Publish site (batched deploys)”

It’s in the list on the left side.

3

Click “Run workflow,” then the green “Run workflow”

A little box drops down on the right — click the green button inside it.

4

Wait about a minute, then refresh your page

Your changes — approvals, edits, sold jets — now show up live on the site and the board.

Approving is not the same as posting

Approving a post just clears it to go. It posts **by itself on its scheduled date** (the date in “Scheduled For”), each morning — not the moment you approve. So don’t worry if it doesn’t go out right away. That’s exactly how it’s meant to work.
